Explicit Constructions of Automorphic Forms (2/2)

vendredi 22 juillet 2022 11:00 (1h 20m)

I will discuss the theory of theta correspondence, highlighting basic principles and recent results, before explaining how theta correspondence can now be viewed as part of the relative Langlands program.
I will then discuss other methods of construction of automorphic forms, such as automorphic descent and its variants and the generalized doubling method.

Summary

Orateur: Prof. GAN, Wee Teck (Nat. Univ. Singapour)
