

The Robin Harmonic Measure on non smooth domains

vendredi 22 mars 2024 11:25 (30 minutes)

We analyze the boundary behavior of solutions to elliptic PDE with prescribed Robin data in rough domains. In particular, we construct a “Robin elliptic measure” and demonstrate the surprising fact that this measure is (quantitatively) mutually absolutely continuous with respect to surface measure on a wide class of domains that includes the complement of certain fractals.
