Finiteness Questions for Étale Coverings with Bounded Wild Ramification at the Boundary

mardi 23 avril 2024 12:15 (1 heure)

We will consider étale coverings $f : Y \to X$ of varieties over an algebraically closed field in characteristic $p > 0$ (with some further restrictions on the boundary ramification, in the non-proper case). This talk will give an overview of some work done with Hélène Esnault and others over the last few years, as well as open problems, related to this theme.

Orateur: Prof. SRINIVAS, Vasudevan (SUNY, Buffalo)
