## Scattering for nonlinear Vlasov equations II

*mardi 26 mars 2024 10:00 (2 heures)*

The minicourse will be about the long-time behaviour of solutions to the Vlasov–Poisson or Vlasov–screened Poisson equations, set in the whole space.

We will mostly try to review: (1) global existence and (modified) scattering for small initial data; (2) scattering in the screened case for initial data close to stable homogeneous equilibria. The approach we will follow for both problems is based on the study of the characteristics associated with Vlasov equations.
