What is a graphon ?

jeudi 23 mai 2024 16:10 (50 minutes)

While studying the limit of graphs with an amount of vertices that goes to infinity, graphons appear as a quite simple and natural object. Based on the article “What is ... a graphon ?” of Glasscock and Lovasz’s monography “Large networks and graph limits”, we present the space of graphons and its underlying topology.
