

## Approximating Transcendental Thurston Theory

*mercredi 11 juin 2025 14:00 (50 minutes)*

We will discuss emerging trends in the study of transcendental Thurston maps, beginning with known results on realization criteria. Our work in progress attempts to realize several objects in transcendental Thurston theory as 'limits' of corresponding objects from the Thurston polynomial setting. We explore the connection between this program and a Thurston-type classification and related problems.
