Convergence of the fully discrete incremental projection scheme for incompressible flows

mardi 2 décembre 2025 11:30 (55 minutes)

The aim of this talks is to prove the convergence of the approximate solutions, given by a first order in time incremental projection scheme, to a weak solution of the time-dependent incompressible Navier-Stokes equations, without any assumption of existence or regularity assumptions on the exact solution.

Orateur: GALLOUËT, Thierry
