require 'capistrano/rails'
```

- Ecrire ses propres extensions (Django)

# Capistrano: Flow

- Capistrano est basé sur Rake (Ruby Make)

```
task :test do
  ruby "test/unittest.rb"
end
```

- cap deploy lance les tâches:

<b>deploy:starting</b>	- start a deployment, make sure everything is ready
<b>deploy:started</b>	- started hook (for custom tasks)
<b>deploy:updating</b>	- update server(s) with a new release
<b>deploy:updated</b>	- updated hook
<b>deploy:publishing</b>	- publish the new release
<b>deploy:published</b>	- published hook
<b>deploy:finishing</b>	- finish the deployment, clean up everything
<b>deploy:finished</b>	- finished hook

```

# Capistrano: retour sur expérience

- Très facile à utiliser, à configurer, à étendre
- Moyennement facile à installer si Ruby n'est pas là (rvm, gem, gemfile)

# Capistrano: retour sur expérience

- Quelques difficultés rencontrées
  - Proxy
