## A limiting case for the divergence equation and related problems

*mardi 4 avril 2017 10:45 (45 minutes)*

Let  $d \geq 2$ ,  $\Omega \subset \mathbb{R}^d$  be a smooth bounded domain and  $f \in L^d(\Omega)$   
with  $\int_{\mathbb{R}^d} f(x) dx = 0$ . Bourgain  
and Brezis proved that there exists a vector field  $X \in W^{1,d}(\Omega) \cap L^\infty(\Omega)$   
such that  $\operatorname{div} X = f$  and  
 $\|f\|_{W^{1,d}} + \|f\|_{L^\infty} \leq C \|f\|_{L^d}$ .

We will discuss various extensions of this result to more general functions  
spaces, and present some related inequalities. This talk is based on results obtained in collaboration  
with P. Bousquet, P. Mironescu, Y. Wang and P. L. Yung.
