Families of isolated singularities and three inspirations from Bernard Teissier

lundi 22 juin 2015 10:00 (50 minutes)

Part of Bernard Teissier's work is a substantial contribution to equisingularity theory. In this talk I will discuss three of the many inspirations his work has given me, and their role in my current approach to the equisingularity of isolated singularities. The talk will use determinantal singularities as an illustration of these ideas.
