## Wandering domains of transcendental functions (joint work with K. Baranski, X. Jarque and B. Karpinska)

*Tuesday, October 24, 2017 11:45 AM (55 minutes)*

We present several results concerning the relative position of points in the postsingular set  $P(f)$  of a meromorphic map  $f$  and the boundary of the successive iterates of a wandering component. We shall also construct an oscillating domain in class B on which the iterates are univalent.
