

p-adic cohomology of some period domains

jeudi 25 avril 2019 11:00 (1 heure)

We will explain how to adapt Orlik's computation of the compactly supported l -adic cohomology of many p -adic period domains (l different from p) to the case $l=p$. The key input is a vanishing theorem for extensions between generalized Steinberg representations of p -adic reductive groups, with coefficients mod p . This is joint work with Pierre Colmez, Julien Hauseux and Wiesława Nizioł.
