q-Stokes phenomenon of basic hypergeometric equations

jeudi 5 septembre 2019 17:20 (1 heure)

We study connection formula on basic hypergeometric equations. Some solutions are represented by divergent power series. Some are divergent basic hypergeometric series, and others are non-hypergeometric type series. We need several q-analogues of the Laplace transformation for different types of divergent power series. This is a jointed work with Changgui Zhang.
