

Vafa-Witten Invariants of Projective Surfaces (2/5)

mardi 6 juillet 2021 11:00 (1 heure)

This course has 4 sections split over 5 lectures. The first section will be the longest, and hopefully useful for the other courses.

1. Sheaves, moduli and virtual cycles
2. Vafa-Witten invariants: stable and semistable cases
3. Techniques for calculation – virtual degeneracy loci, cosection localisation and a vanishing theorem
4. Refined Vafa-Witten invariants

Summary

Orateur: Prof. THOMAS, Richard (Imperial College London)
