

Conference: Meeting of the National Research Group on Gravitational Waves

Contribution ID: 54 Type: TESTS DE LA RELATIVITÉ GÉNÉRALE ET THÉORIES ALTERNATIVES

How does a dark compact object ringdown?

Thursday, April 1, 2021 3:15 PM (15 minutes)

Gravitational waves from the coalescence of compact binaries provide a unique opportunity to test gravity in strong field regime. In particular, the postmerger phase of the gravitational signal is a proxy for the nature of the remnant.

This is of particular interest in view of some quantum-gravity models which predict the existence of horizonless compact objects that overcome the paradoxes associated to black holes. Such dark compact objects can emit a modified ringdown with respect to the black hole case and late-time gravitational wave echoes as characteristic fingerprints.

In this talk, I develop a generic framework to the study of the ringdown of dark compact objects and provide a gravitational-wave template for the echo signal. Finally, I assess the detectability of dark compact objects with current and future gravitational-wave detectors.
