

Loïc Le Treust: "The Dirac bag model in strong magnetic field"

jeudi 19 janvier 2023 11:25 (55 minutes)

We study Dirac operators on two-dimensional domains coupled to a magnetic field perpendicular to the plane. We focus on the infinite-mass boundary condition (also called MIT bag condition). In the case of bounded domains, we establish the asymptotic behavior of the low-lying (positive and negative) energies in the limit of strong magnetic field.
