

Combinatorics of the Amplituhedron

Tuesday, November 29, 2022 2:25 PM (45 minutes)

The amplituhedron is the image of the positive Grassmannian under a map induced by a totally positive matrix. It was introduced by Arkani-Hamed and Trnka to compute scattering amplitudes in $N=4$ super Yang-Mills. I'll give a gentle introduction to the amplituhedron, surveying its connections to cluster algebras, matroids, and combinatorics (Eulerian numbers, Narayana numbers, etc).

Presenter: Prof. WILLIAMS, Lauren (Harvard University)
