

Minimality of strong unstable foliations

vendredi 31 mai 2024 15:30 (1 heure)

Abstract: I will discuss the minimality of the unstable foliations of partially hyperbolic diffeomorphisms with one-dimensional center, and in particular the abundance and the robustness of this property. This is part of a joint project in many combinations with A. Avila, S. Eskin, R. Potrie, A. Wilkinson and Z. Zhang.
