

Cobordism and Spaces of Manifolds

mercredi 20 septembre 2023 10:50 (50 minutes)

Thom's most celebrated work developed the notion of cobordism of manifolds, and translated the problem of classifying manifolds up to cobordism into a problem in homotopy theory: this translation is mediated by his Transversality Theorem. I will describe a different point of view on this topic, arising from the modern theory of cobordism categories.

Orateur: Prof. RANDAL-WILLIAMS, Oscar (Univ. de Cambridge)
